

**VOLUNTARY REMEDIATION PROGRAM
DEPARTMENT OF ENVIRONMENTAL MANAGEMENT**

PROJECT SUMMARY

Site name: Anchor Glass

Applicant Name: Anchor Glass Corporation

Site location: 603 East North Street
Winchester, Randolph County, IN

VRP Site No.: 6951003

Project Manager: Bill Wieringa

Date received: October 28, 1995

Date completed: March 1, 2002

Contaminant(s): VOCs, SVOCs and Metals

Media cleaned up: Soils and Groundwater

Cleanup Objectives Achieved: Tier II Nonresidential

Deed/Land use restrictions: Property shall remain nonresidential use.

Project Summary: The Anchor Glass Container facility is approximately 27.8 acres in size and includes approximately 600,000 square feet of buildings under one roof. The site addressed a 7.2 acre parcel on the north side of the facility. In the 1800's, the David Glass Plant was the first facility that was built on this site. The site has been utilized as a glass manufacturing facility to present day. Results from a site investigation in 1994 showed two areas of concern that required remediation. The first area was TCE-impacted soils in a former settling pond area and the second was machine oil free product at the western portion of the study area. The TCE impacted soils were excavated and sent to a proper disposal facility. The site installed a free product recovery system at the site in August 1997. During the remediation, a total of 1,469 gallons of machine oil free product was removed and the site closed the area leaving a sheen or less. Total groundwater remediation time was 4.3 years.
